

Accurate

Repeatable

Versatile

The MicroScribe is a three-dimensional digitizer that offers a fast, flexible and affordable solution for many manufacturing, concept-to-product engineering, model making and graphic arts applications. The MicroScribe drivers provide a simple way to read 3D data into the LabVIEW environment.

The drivers can be configured easily in the Advanced Interface which comes as an out-of-the-box solution for data acquisition. They also include a palette to allow you to get under the hood and access data directly in your own custom LabVIEW applications.
