

Accurate

Repeatable

Versatile

The Romer Absolute Arm is a three-dimensional digitizer that offers a high precision solution for design engineering, production, and metrology applications. The Romer Arm drivers provide a simple way to read 3D tip position data into the LabVIEW environment.

The drivers can be configured easily in the Advanced Interface which comes as an out-of-the-box solution for data acquisition. They also include a palette to allow you to get under the hood and access data directly in your own custom LabVIEW applications.
